

Nicolás Von Muhlinen

Full-Stack Engineer · Systems Analyst

Córdoba, Argentina · nicovon24@gmail.com · +54 351 200 7668 · [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

Full-Stack Engineer with 4 years building production systems for clients in the US and LATAM. I work across the whole stack, from data modeling and architecture to the interfaces people actually use. At Sensary I led an IoT platform that had been stalled for two years and took it from 3 to 8+ active customers, and I built the real-time tracking system that handled 200 simultaneous users for its largest client. My main tools are TypeScript, React, Angular, Node.js, NestJS, FastAPI and AWS. I also studied Systems Analysis, which is where the design and data modeling side of my work comes from.

EXPERIENCE

Sensary, Full-Stack Engineer 2023 – Jul 2026

Junior → Mid-level → Senior Full-Stack Developer

- Led development of IoTLogIQ, Sensary's IoT and asset/device management platform, after two years without progress, grew the active customer base from 3 to 8+ through product, UI and architecture work.
- Led the fullstack team, owned the architecture and telemetry dashboard decisions that set how real-time data was structured, visualized and consumed across the platform, and drove AI tooling adoption across the engineering team.
- Led the migration from ThingsBoard to an in-house Angular + Node.js stack, removing the external vendor dependency.
- Delivered 10+ tailored solutions across 6 verticals for Shell, ENI, AES, Ternium, IAC and Jacksonville Airport: **AirportIQ** (people counting and flow, queue management, air quality, threshold alarms and control-room dashboards), **WorkerIQ** (geolocated worker tracking, mustering and operational alerts), **DustIQ** (particulate monitoring), **TrashCans** (smart waste containers) and the platform's **device and asset administration module**.
- Built an end-to-end real-time tracking solution that handled 200 simultaneous people for a large-scale client.
- Improved perceived and actual dashboard performance: server-side pagination, debounced filters, cached requests and skeleton loaders, backed by database and API indexing.
- Integrated AI into the product's data pipelines to turn raw telemetry into predictive analytics.
- Designed a bulk provisioning wizard for devices and assets and led the migration of multi-vendor sensor decoders, which simplified configuration and data processing.
- Implemented WebSocket data streaming over a multi-tenant architecture with per-client and per-role access control, with end-to-end testing on the platform's critical flows.
- Ran technical interviews and mentored new developers during onboarding.

PROJECTS

Electoral Management Platform 2025–present

- Built with a multidisciplinary team to register, train and assign 20,000+ poll watchers across the province of Córdoba.
- Helped design the system that centralized 20,000+ vote-count reports in real time under election-night concurrency, and trained the end users on it.
- Developed the organization's public sites with zero downtime through election-day peaks; currently building a CRM for affiliates, poll watchers and coordinators.

Freelance IoT Products 2025

- Owned the full product cycle for two international clients: requirements, UX/UI design, MVP definition and delivery.

- Chile: pontoon fleet monitoring platform, designed and shipped from scratch. Ecuador: oil-tank monitoring with threshold alarms and email/mobile alerting.
- Built an internal IoT administration app for client staff, and ran onboarding and training.

Personal Projects

- **IoTArg**: multi-tenant IoT fleet management platform with device hierarchies and role-based access control, over REST + WebSocket APIs (NestJS, Next.js, TypeScript, Prisma, PostgreSQL, Redis, Docker).
- **Fintrack** — multi-currency personal finance and investments platform. Java 21 + Spring Boot 4 (JPA, Spring Security, JWT + OAuth2), Angular frontend, live FX/brokerage data.
- **Prodeazo** — World Cup 2026 predictions and stats platform (Next.js, TypeScript, Supabase).
- **AWS Study App** — interactive study tool mapping ~80 AWS services for the Cloud Practitioner exam (Next.js, TypeScript).

EDUCATION

Systems Analysis and Software Development, IES Feb 2022 – Feb 2026

- Graduated. Final project: Posada Dormis, a booking management system with real-time availability, an occupancy calendar and automated email confirmations.
- Data Structures & Algorithms, Database Design, Software Architecture, Systems Analysis, Networks.

TECHNOLOGIES

- **Languages**: JavaScript, TypeScript, Python, Java
- **Frontend**: React.js, Next.js, Angular, Redux, Zustand, RxJS, Zod, TailwindCSS, HTML5, CSS
- **Backend**: Node.js, Express.js, NestJS, Fastify, GraphQL, FastAPI, REST APIs, WebSockets, Redis, Auth0
- **Data**: PostgreSQL, MySQL, MongoDB, Supabase, Prisma, Drizzle, Sequelize
- **Cloud and DevOps**: AWS, Docker, Kubernetes, Vercel, Railway, GitHub Actions
- **Mobile and Testing**: React Native, Expo, Android Studio, Jest, Vitest, React Testing Library, Playwright
- **AI in development**: Cursor, Claude, Gemini MCPs, spec-driven development, LLM integrations
- **IoT**: ThingsBoard, MQTT, LoRaWAN, Node-RED

LANGUAGES

Spanish native · English advanced C1 · Portuguese upper-intermediate

CERTIFICATIONS

- Developing and Implementing AI Solutions, Carnegie Mellon University (Aug 2026)
- AI Agents Fundamentals (Aug 2026)
- AI Verified, TheFlock (Jun 2026)
- Claude Code in Action, Anthropic (Jun 2026)
- IoT Master Course: Connect to the Future, Udemy (Oct 2023)
- Full-Stack Development Bootcamp, 800+ hours, Henry Bootcamp (Nov 2022 – Apr 2023)

SOFT SKILLS

Adaptability, fast learner, leadership, problem-solving, autonomy, teamwork, communication
