

NICOLÁS VON MUHLINEN

Full-Stack Developer | Systems Analyst

Córdoba, Argentina · nicovon24@gmail.com · +543512007668 · [LinkedIn](#) · [Github](#) · [Portfolio](#)

PROFILE

Full-Stack Developer and Systems Analyst with 3+ years of experience building production products for clients in the US and LATAM, focused on scalable, high-concurrency, real-time systems. I move with equal strength between frontend and backend (React, Next.js, Node.js, NestJS, FastAPI, TypeScript, AWS), and have shipped products to production across sectors as varied as mission-critical electoral platforms, industrial IoT ecosystems, hotels, and sports applications. I integrate AI tools (Cursor, Claude, Gemini) into my daily workflow to speed up delivery without sacrificing quality. My Systems Analyst background gives me a strong foundation for systems design and architecture decisions, from data modeling to how components fit together.

TECHNOLOGIES

Core stack: React.js/Angular, Express/Fastify/FastAPI, PostgreSQL/MongoDB, AWS

Languages: JavaScript, TypeScript, Python, Java

Frontend: React.js, Next.js, Angular, Redux, Zustand, RxJS, Zod, TailwindCSS, HTML5, CSS

Mobile: React Native, Expo, Android Studio

Backend: Node.js, Express.js, NestJS, Fastify, FastAPI, REST APIs, WebSockets, Redis, Auth0

Data: PostgreSQL, MySQL, MongoDB, GraphQL, Supabase, Prisma, Drizzle, Sequelize

AI applied to development: Cursor, Claude, Gemini MCPs, spec-driven development, LLM integrations

DevOps & Cloud: Docker, Kubernetes, AWS (Lambda, EC2, S3, RDS, DynamoDB, SQS, SNS), Vercel, Railway, GitHub Actions

IoT / Platforms: ThingsBoard, MQTT, LoRaWAN, Node-RED

Testing: Jest, Vitest, React Testing Library, Playwright

EXPERIENCE

Senzary — Fullstack Engineer *Jun. 2023 – Jul. 2026*

Progression: Junior → Mid-level → Senior Full-Stack Developer

- Led the development of IoTlogiq, Senzary's IoT and asset/device management platform, which had been stagnating for 2 years — grew the active customer base from 3 to 8+ through product, UI, and architecture improvements, and over the following three years delivered a steady stream of UI, performance, usability improvements and a system of notification via email and phone.
- Led the fullstack team, while driving key architecture and dashboard/telemetry design decisions — defining how real-time data was structured, visualized, and consumed across the platform.
- Optimized platform performance (DB/API indexing and caching, request caching, debouncing), achieving a reduction in dashboard load times.
- Integrated AI into the product's data pipelines, turning raw telemetry into predictive analytics.
- Built an end-to-end real-time tracking solution, enabling live tracking of 200 simultaneous people for a large-scale client.
- Led fullstack IoT solutions across multiple verticals: predictive maintenance, people counting, air quality, asset tracking, temperature/humidity, and airport asset management.
- Designed a bulk provisioning wizard for IoT entities and led the migration of multi-vendor sensor decoders, optimizing configuration and data processing.
- Conducted technical interviews and mentored new developers through onboarding.

Stack: React · TypeScript · Node.js · REST APIs · WebSockets · MQTT · LoRaWAN · AWS · ThingsBoard

PROJECTS

Fullstack Technical Lead | Electoral Management Platform 2025 – Currently

- Part of a multidisciplinary team that built, on a project basis, a province-scale electoral management platform for a political organization.
- Contributed to an application that successfully connected 20,000+ electoral poll watchers across the city of Córdoba, covering registration, training, and strategic assignment.
- Took part in designing and training on the system for uploading and centralizing 20,000+ vote-count reports from across the province of Córdoba, processed in real time on election night under high concurrency.
- Developed the institution's official public sites and interfaces, maintaining zero downtime through traffic peaks throughout election day.
- Currently developing, together with the team, a CRM for the same organization, focused on managing and tracking affiliates, poll watchers, and coordinators.

Stack: *React · Next.js · Vue · TypeScript · Node.js · NestJS*

Full-Stack Developer | Football Apps (2026)

- **Prodeazo:** full-stack web app to predict 2026 World Cup match results.
- **Scout App:** platform for scouts and clubs to track football players, integrating the Bzoiro sports API for live data.
- **Stack:** *React Native · Expo · Typescript · NestJS · Bzoiro API · Vercel*

Full-Stack Developer | IoT (Freelance) (2025)

- IoT solution for a Chilean company focused on managing and monitoring pontoons.
- IoT solution for an Ecuadorian company focused on managing and monitoring oil tanks, featuring alarms and email/mobile messaging systems
- **Stack:** *Angular · Node.js · Thingsboard*

EDUCATION

Systems Analysis and Software Development — IES - Feb. 2022 – Feb. 2026 · Graduated

Final project: Posada Dormis — Booking management system with real-time availability, an occupancy calendar, and automated email confirmations.

CERTIFICATIONS

- AI Verified – TheFlock (Jun. 2026)
- Claude Code in Action - Anthropic (Jun. 2026)
- IoT Master Course – Connect to the Future, Udemy (Oct. 2023)
- Full-Stack Development Bootcamp | 800+ hours, Henry Bootcamp (Nov. 2022 – Apr. 2023)

LANGUAGES

Spanish: Native · English: Advanced (C1) · Portuguese: Upper-Intermediate (B2)

SOFT SKILLS

Flexibility/Adaptability · Fast learner · Leadership · Problem-solving · Autonomy · Teamwork · Communication
