## AI Engineer · Full-Stack

Córdoba, Argentina · nicovon24@gmail.com · +54 351 200 7668

[LinkedIn](#) · [GitHub](#) · [Portfolio](#)

---

AI Engineer with a full-stack background and software experience since 2023. At Senzary, I led the development team and built a Model Context Protocol (MCP) server used by customers in production. I build LLM applications with validated outputs and backend access controls, and evaluate coding agents at AnyoneAI. Available for full-time roles alongside a flexible, part-time contract and freelance work.

## TECHNICAL SKILLS

---

**Applied AI:** LLM applications, Model Context Protocol (MCP), tool calling, structured outputs, Spring AI, LangChain, Groq, LLM evaluation, coding-agent benchmarks.

**Backend & systems:** TypeScript, Node.js, NestJS, Java, Spring Boot, REST APIs, WebSockets, multi-tenant systems, RBAC, PostgreSQL, Redis, OAuth 2.0/PKCE.

**Frontend:** React, Next.js, Angular, RxJS, Tailwind CSS.

**Python & RAG project:** LoRa Desk (in development): Python, FastAPI, hybrid retrieval, pgvector, Langfuse.

**Cloud & testing:** AWS, Docker, CI/CD, GitHub Actions, JUnit, Mockito, Vitest, Jest, Playwright.

**AI-assisted development:** Claude Code, Codex, Cursor, spec-driven development.

## PROFESSIONAL EXPERIENCE

---

### AnyoneAI | AI Trainer Engineer

Aug 2026 - Present · Independent contractor · Flexible part-time · Remote

- Build benchmark datasets and expert evaluations for coding agents and code-editing models on Project Nectarine (client: LinkedIn).
- Analyze model failures in real developer workflows and document failure patterns.

### Senzary | Senior Full-Stack Developer

Jan 2023 - Jul 2026 · Miami, US · Remote

Junior Frontend (Jan 2023 - Sep 2024) → Semi-Senior Frontend (Sep 2024 - Sep 2025) → Senior Full-Stack (Sep 2025 - Jul 2026)

- Led the full-stack team and contributed to platform growth from 3 to 10+ enterprise customers through product and engineering work.
- Built an MCP server used by customers in production, exposing devices, telemetry and alarms for natural-language queries with tenant-level access control.
- Led the migration from ThingsBoard to an Angular + Node.js stack and designed multi-tenant WebSocket streaming with role-based access.
- Built real-time personnel tracking for 200 people at ENI; improved dashboard performance through indexing, caching and server-side pagination.
- Introduced AI-assisted development with Claude Code and Codex; conducted technical interviews and mentored developers.

## AI PROJECTS

---

### FinTrack | Investment research assistant

Personal use · Java, Spring Boot, Spring AI, Groq, Angular, PostgreSQL · [View project](#)

- Built a structured-output planner that gathers evidence from read-only brokerage MCP tools and Finnhub. Java assembles numeric tables from provider data or deterministic calculations, with sources and timestamps.
- Implemented a Java MCP client with OAuth 2.0/PKCE, AES-GCM token encryption and an exact-name tool allowlist; added prompt-injection defenses, bounded memory and privacy controls.
- Added regression tests for context carryover and ticker resolution. A dedicated 30-question assistant evaluation set is planned.

### Hermes | Agent-to-agent B2B commerce

Hackathon demo · 2nd place, HackCBA/26 Fintech · Team of 5 · [View project](#)

- Built the backend and agent integration using TypeScript, LangChain and Groq. Constrained model outputs with strict schemas, deterministic fallbacks and server-side checks on budget, stock and amounts.
- Implemented correlation-ID idempotency, audit events and SSE progress. The team demo includes on-chain settlement.

### LoRa Desk | Hybrid RAG + MCP

In development · Public code; corpus and catalog pending · [View project](#)

- Building an assistant with Python, FastAPI, LangChain, hybrid RAG infrastructure (pgvector + full-text) and MCP over stdio. Deterministic decoder integration works; document retrieval and recommendations await a corpus and curated catalog.

## FULL-STACK PROJECTS

---

### Polytics | Electoral operations platform

Freelance · Jan 2025 - Present · Node.js, NestJS, Next.js

- Built the app for 20,000+ poll watchers and helped design the system that centralized 20,000+ vote-count reports on election night, with no data loss reported during the event.
- Built public sites with no downtime reported during election-day peaks. Currently developing a new app version and a CRM.

### Prodeazo | Football predictions

Production · Co-built · Next.js, TypeScript, Supabase · [View project](#)

- Real-time fixtures and results, predictions, points and global/league rankings for the 2026 World Cup.

## EDUCATION

---

Systems Analyst degree, IES Córdoba | 2022 - 2026 · Graduated

Full-Stack Development Bootcamp, Henry | Nov 2022 - Apr 2023. Teaching Assistant in 2023.

## CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

---

AWS Certified AI Practitioner: Earned Sep 28, 2026.

AWS Certified Cloud Practitioner - in progress (exam preparation)

Developing and Implementing AI Solutions, Carnegie Mellon (online, Aug 2026).

AI Agents Fundamentals, Hugging Face (Aug 2026) · Claude Code in Action, Anthropic (Jun 2026) · AI Verified, TheFlock (Jun 2026).
