Nicolás Von Muhlinen

Software Engineer | Full-Stack Development & Applied AI

+54 351 200 7668 | nicovon24@gmail.com | linkedin.com/in/nicolas-von-muhlinen | github.com/nicovon24 | nicovon-arg.vercel.app | Córdoba, Argentina

Software engineer with 4 years of professional experience building full-stack TypeScript products and real-time systems with Node.js, React and Angular. At Senzary, progressed from Junior to Senior Full-Stack Developer, led a React and Node.js migration, built a customer-facing MCP server in production and cut dashboard load times roughly in half. Experience spans frontend, APIs, multi-tenant systems and applied AI integrations. Based in Córdoba, Argentina; English C1.

TECHNICAL SKILLS

Programming languages: TypeScript, Python, Java

Backend: Node.js, NestJS, Fastify, FastAPI, Spring Boot, GraphQL, gRPC, Redis, IoT, MQTT

Frontend: React, React Native, Angular, Next.js, TanStack Query, Zustand, Redux, Tailwind CSS, RxJS

Applied AI: MCP, LangChain, Spring AI, Groq

Databases & ORMs: MongoDB, PostgreSQL, MySQL, Prisma, Drizzle

Cloud and delivery: AWS, Docker, GitHub Actions, CI/CD

Testing: Jest, Vitest, Playwright, React Testing Library

System Design & Practices: Clean Architecture, Event-Driven Architecture, TDD, real-time systems

Languages: Spanish native, English C1, Portuguese upper-intermediate

PROFESSIONAL EXPERIENCE

Senzary | Senior Full-Stack Developer

Jan 2023-Present | Remote | React | Node.js

Remote, Miami-based team. Progressed from Junior Full-Stack Developer (Jan 2023-Sep 2024) to Semi-Senior (Sep 2024-Sep 2025) and Senior (Sep 2025-Present).

- Led the full-stack development team and participated in technical decisions, code reviews, technical interviews and developer mentoring; contributed to growth from 3 to 10+ enterprise customers through the development and evolution of company solutions.
- Designed and developed an airport solution integrating interactive maps, event processing, real-time updates, alarms and notifications.
- Built a customer-facing MCP server used in production to query devices, telemetry and alarms with tenant-level access controls.
- Led the migration from ThingsBoard's native frontend to React and Node.js, with multi-tenant WebSocket streaming and role-based access.
- Cut dashboard load times roughly in half through database indexing, caching and server-side pagination; delivered real-time personnel tracking for 200 people at ENI.
- Maintained an IoT platform for 10 clients and 100 users; built Node.js services, REST APIs and rule chains for alarms, GPIO control and OEM equipment.
- Built interfaces and industrial dashboards in React; developed components and widgets with React and Angular, integrating REST APIs, MQTT and real-time telemetry visualization. Wrote and migrated payload decoders for Milesight, Ellenex, Synetica and Sensative sensors.
- Introduced AI-assisted development tools, including Claude Code and Codex, into the team's workflow.
- Helped relaunch IoTLogIQ after a roughly two-year stall, working on both the dashboard and API layer.

PROJECTS

AnyoneAI: coding agent evaluation | Part-time project, 2026-present

- Part-time contract project; client: LinkedIn. Evaluate coding agents on debugging, refactoring and multi-file development tasks. Perform manual QA on AI-generated applications and build benchmark tasks and labeled evaluation data.

Polytics | Freelance | Part-time project, 2025-present

Node.js, NestJS, Next.js

- Built an electoral operations application for 20,000+ poll watchers and helped design the system that centralized 20,000+ vote-count reports on election night, with no data loss reported during the event.

Hermes | 2nd place, HackCBA/26 Fintech

TypeScript, LangChain, Groq

- Team hackathon demo for agent-to-agent B2B commerce. Built the TypeScript backend and LLM integration with strict schemas, deterministic fallbacks, server-side checks and audit events.

FinTrack

Angular, Java, Spring Boot, Spring AI, Groq, PostgreSQL

- Built an investment research assistant with read-only brokerage MCP tools, OAuth 2.0/PKCE, encrypted tokens and an exact-name tool allowlist. Java assembles financial tables from provider data or deterministic calculations.

EDUCATION

Analista de Sistemas (Systems Analyst) 2026
IES Córdoba
Graduated.

Full-Stack Development Bootcamp 2023
Henry
Teaching Assistant in 2023.

CERTIFICATIONS

AWS Certified AI Practitioner 2026
AWS

Developing and Implementing AI Solutions 2026
Carnegie Mellon online

AI Agents Fundamentals 2026
Hugging Face

Claude Code in Action 2026
Anthropic

AI Verified 2026
